Microbes are really wonderful. They are everywhere! They live all around you, on you and inside you! Microbes are very small, so you can't see them. But don't worry. Some microbes make you sick but most others keep you healthy and even help you to fight disease. There are so many different types of microbes. We still don't really know how many there are, but we know that microbes do lots of different things. Bacteria and viruses are two important types of microbes.

Bacteria are really important microbes. They are very small. They have only one cell. Bacteria can live in any area of the earth. They aren't all bad; in fact, you couldn't live without some bacteria.

Viruses are among the smallest microbes on the earth, even smaller than bacteria. They are different from bacteria because they cannot live on their own. Viruses need to be inside a living cell to live and grow. There aren't many good things about viruses. **They** usually attack your body and make you sick!

The world around us is full of great things. Knowing this world is very interesting for humans. One group of people who study the world are scientists. They work hard and try to solve problems and find facts. They learn about the world by observing and searching.

Some scientists become very rich and famous. Many people around the world may remember their names, faces and inventions. But this is not what they call 'success'. The key to their success is their hard work, belief in themselves and never giving up.

There are great stories about scientists and their lives. One such a story is about Thomas Edison. He was very interested in science. Sadly, Edison lost his hearing at the age of 12. After that he did not attend school, but he never lost his interest in science and making things.
